is organising

**3rd Croatian Congress on
Biosafety and Biosecurity**

with international participation

**Zagreb, Croatia
May 28 – 30, 2026**

Dear Colleagues,

It is our great pleasure and honor to announce the 3rd Croatian Congress on Biosafety and Biosecurity with international participation.

Building on the tradition of previous gatherings—and in an era marked by global instability, where issues of biosafety and biosecurity are at the forefront of international concern—this congress serves as a platform for bringing together experts from a wide range of sectors, including healthcare, science, veterinary services, security and defense, industry, education, and relevant government bodies.

The aim of the congress is to promote interdisciplinary collaboration, facilitate the exchange of knowledge and experiences, and encourage collective reflection on current challenges and future directions in the field of biosafety and biosecurity.

As humanity faces increasingly complex biological threats—from naturally occurring epidemics to potential biological incidents and attacks—the responsibility to develop effective biosafety and biosecurity systems becomes ever more critical. In this context, the congress will focus on strengthening national protection capacities, the latest diagnostic methods, international cooperation, rapid response to biological threats, effective prevention and protection measures, and many other relevant topics.

We invite you to contribute to the success of this congress with your participation, expertise, and experience, and to support our shared goal: building a safer and more resilient society in the face of biological risks.

PRESIDENT OF THE SOCIETY

Ljiljana Žmak
